

TABLE

Showing number of days from any day in one month to the same day in any other month. For example, if a Bill is dated 5th March @ 4 months' date, look for March on the left-hand side of the Table, and run your finger along to July, the month in which the Bill falls due; and you have 122 days, which with the 3 days of grace gives 125 days as the required number. Or, without even considering in what month the Bill falls due, you may also find that out by running your finger along till it comes under "month 4." Add one day if February 29 comes between the two dates.

From any Day in	To the same day in any other Month.

SHAW'S
UNIVERSAL INTEREST TABLES.

Price 3/- Cloth Boards, or 4/6 Half-Calf.

This Work, which is supplied by post only, will be forwarded at above prices, post free, to any address in the world. All orders to be sent direct to W. SHAW, Maybole, Scotland.

P R E F A C E.

THE following Interest Tables are divided into three sections. The first section (pages 1 to 40) consists of **Interest Tables for a Half-Year**, and is designed for the use of all who have to do with the calculation of termly Interest. Each rate occupies a page, beginning with £1 of principal, and ascending by units to £100, then by hundreds to £5000, and so on. The Interest on *Shillings* (1/- to 20/-) is also given. In order to meet every ordinary requirement I have given no fewer than 40 different rates, viz.,

$\frac{1}{8}$	1	2	3	4	5
	$1\frac{1}{8}$	$2\frac{1}{8}$	$3\frac{1}{8}$	$4\frac{1}{8}$	
$\frac{1}{4}$	$1\frac{1}{4}$	$2\frac{1}{4}$	$3\frac{1}{4}$	$4\frac{1}{4}$	$5\frac{1}{4}$
	$1\frac{3}{8}$	$2\frac{3}{8}$	$3\frac{3}{8}$	$4\frac{3}{8}$	
$\frac{1}{2}$	$1\frac{1}{2}$	$2\frac{1}{2}$	$3\frac{1}{2}$	$4\frac{1}{2}$	$5\frac{1}{2}$
	$1\frac{5}{8}$	$2\frac{5}{8}$	$3\frac{5}{8}$	$4\frac{5}{8}$	
$\frac{3}{4}$	$1\frac{3}{4}$	$2\frac{3}{4}$	$3\frac{3}{4}$	$4\frac{3}{4}$	6
	$1\frac{7}{8}$	$2\frac{7}{8}$	$3\frac{7}{8}$	$4\frac{7}{8}$	

The *fractions* of a Penny (in decimals) are all given, and, in the Half-Yearly Tables, these are not mere *approximations*, but are *absolutely correct to the remotest fraction*. Thus the Interest on £82 for a Half-Year at $3\frac{3}{8}\%$ is seen at a glance to be £1 7s 8d and 1-10th of a penny, which for practical purposes you will call £1 7s 8d. If the fractions are not wanted they can be ignored. But they are given in case they should be required. Indeed, if you take down the Interest on fifty different sums by these Tables, and add it up, you will find it to be in *perfect agreement* with the Interest on the *total* amount of the fifty sums.

Interest for Any Number of Days.

In the following Tables provision has also been made for the Calculation of Interest for **any number of days**, the Tables in the second and third sections of the book (extending to about one-hundred-and-fifty pages) being designed for that purpose. In

point of fact, these two sections provide you with **General Interest Tables** which show the Interest on **any amount** for **any number of days** at **any rate per cent.** The Rule is simply :—Multiply the amount by the days (using the Table of Multiplications for that purpose), then turn to the section “Interest on Products,” where you will find the Interest required.

To explain the working,

Let us suppose that you wish to know the Interest on £166 for 94 days at $3\frac{3}{8}\%$. Turn to 166 at top of page in Multiplications, and you will see at a glance that 166 multiplied by 94 is 15604. Then refer to rate $3\frac{3}{8}\%$ in last section of the Book, and you will find that the Interest on 15000 is.....£1 7 8·9
 While the Interest on the odd figures (604) is seen to be $\frac{1}{1} \frac{1}{1} 4$

Thus showing the required Interest to be.....£1 8 10·3

Or, for practical purposes, £1 8s 10d. Of course in ascertaining the Interest on the **Product** (15604) it is not absolutely necessary to use the pencil. By a simple inspection of 15000 on the right-hand page, and 604 on the left, you may add the Interest together “with your eye.”

Simple—Rapid—Accurate.

This method of Interest-Calculation will be found simple, rapid and accurate. Take, for example, one of the **sixteenth** rates sometimes quoted in the London market for short loans—say £13000 for 7 days at $13\text{-}16\text{ths}\%$. Now, it will be admitted that the finding of the Interest in this case is a cumbrous operation by the ordinary methods. But by these Tables the Interest is found with the greatest ease. You see (without even turning up the Tables of Multiplications) that 7 times 13000 is 91000, and in “Interest on Products,” under $13\text{-}16\text{ths}$, you perceive at a glance that the Interest on 91000 is £2 0s 6d. In this case the Interest, even at the fractional rate of $13\text{-}16\text{ths}$, has been ascertained at a single inspection and with perfect accuracy. I think this simple and reliable method of Interest-Calculation must commend itself to Bankers, Lawyers, Accountants, Public Companies, and all Business Men who have transactions requiring the Calculation of Interest on various amounts, for various periods, at various rates per cent.

To meet all requirements that are likely to arise, I have given "Interest on Products" at 55 different rates, namely:—

$\frac{1}{16}$	$\frac{3}{8}$	$\frac{11}{16}$	1	2	3	4	5
			$1\frac{1}{8}$	$2\frac{1}{8}$	$3\frac{1}{8}$	$4\frac{1}{8}$	$5\frac{1}{4}$
$\frac{1}{8}$	$\frac{7}{16}$	$\frac{3}{4}$	$1\frac{1}{4}$	$2\frac{1}{4}$	$3\frac{1}{4}$	$4\frac{1}{4}$	$5\frac{1}{2}$
			$1\frac{3}{8}$	$2\frac{3}{8}$	$3\frac{3}{8}$	$4\frac{3}{8}$	$5\frac{3}{4}$
$\frac{3}{16}$	$\frac{1}{2}$	$\frac{13}{16}$	$1\frac{1}{2}$	$2\frac{1}{2}$	$3\frac{1}{2}$	$4\frac{1}{2}$	6
			$1\frac{5}{8}$	$2\frac{5}{8}$	$3\frac{5}{8}$	$4\frac{5}{8}$	$6\frac{1}{4}$
$\frac{1}{4}$	$\frac{9}{16}$	$\frac{7}{8}$	$1\frac{3}{4}$	$2\frac{3}{4}$	$3\frac{3}{4}$	$4\frac{3}{4}$	$6\frac{1}{2}$
			$1\frac{7}{8}$	$2\frac{7}{8}$	$3\frac{7}{8}$	$4\frac{7}{8}$	7
$\frac{5}{16}$	$\frac{5}{8}$	$\frac{15}{16}$	$1\frac{7}{8}$	$2\frac{7}{8}$	$3\frac{7}{8}$	$4\frac{7}{8}$	7

It is scarcely needful for me to explain that the term *Products* signifies what is produced by multiplying *amount* and *days* together. For example, the product of £100 for 10 days is 1000. It is thus clear that product 1000 means £1000 for 1 day, which is the same thing as £100 for 10 days. Products, therefore, represent **Pounds Sterling for One day.**

The fractions in Section "Interest on Products" are given decimally, to the nearest tenth of a penny.

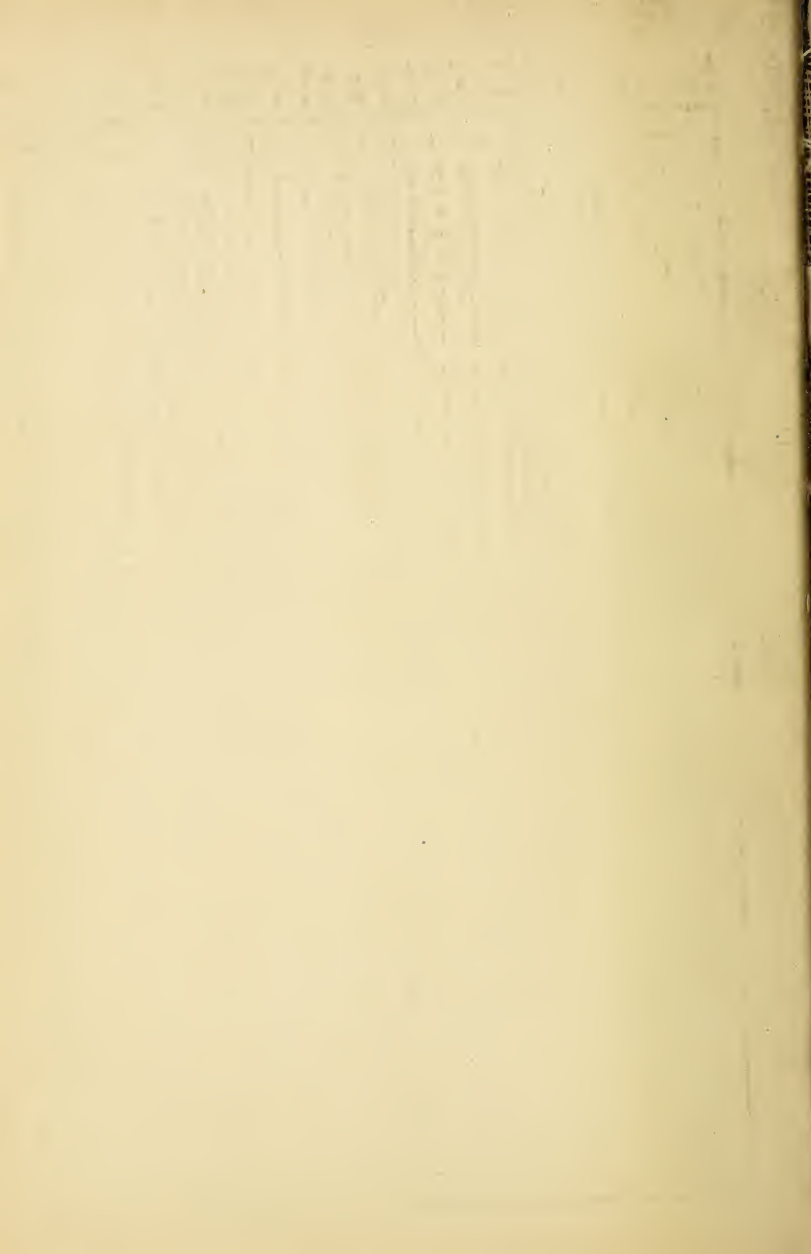

It is believed that the "Table of Multiplications" (comprising some Nineteen Thousand different combinations) will be found of great practical utility. When it is desired—for the calculation of Interest on Bills, Deposits, Investments, &c.—to multiply amount by days, the Tables will at once give you the required "product," and so do away with the risk of error in performing the operation with your pencil. They will be specially useful in "extending the products" in Current Accounts and Bank Ledgers.

I need not say that the greatest care has been taken to ensure absolute accuracy. Every calculation has been carefully verified, and every page has been afterwards examined minutely, besides being summed up and proved, so as to provide a double check on the whole work.

W. SHAW.

MAYBOLE, Scotland,
January, 1897.
